A comprehensive analysis of the relationship between smoking and educational inequalities in cancer mortality in the Canadian adult population.

Causal differences in blood arsenic and mercury concentrations by following the dietary recommendation on seafood intake during pregnancy.

A healthy childhood environment helps to combat inherited susceptibility to obesity.

Associations between soluble receptor for advanced glycation end product (sRAGE) and fecundability and fertility in women attempting pregnancy.

A simulation study comparing the performance of inverse probability weighting and g-computation.

A pharmacoepidemiologic approach to evaluate real-world hormonal contraceptive failure using administrative claims data.

Association between prescription opioid supply and fatal drug poisonings in the United States.

A simulation study comparing the performance of inverse probability weighting to assess a community-based nutrition intervention in Armenia.

Application of propensity score matching and inverse probability of treatment weighting to assess a community-based nutrition intervention in Armenia.

Association between e-cigarette use and sleep deprivation in American 18-24 year-old adults: Results from the 2018 BRFSS.
